

# Different part of a solar oven

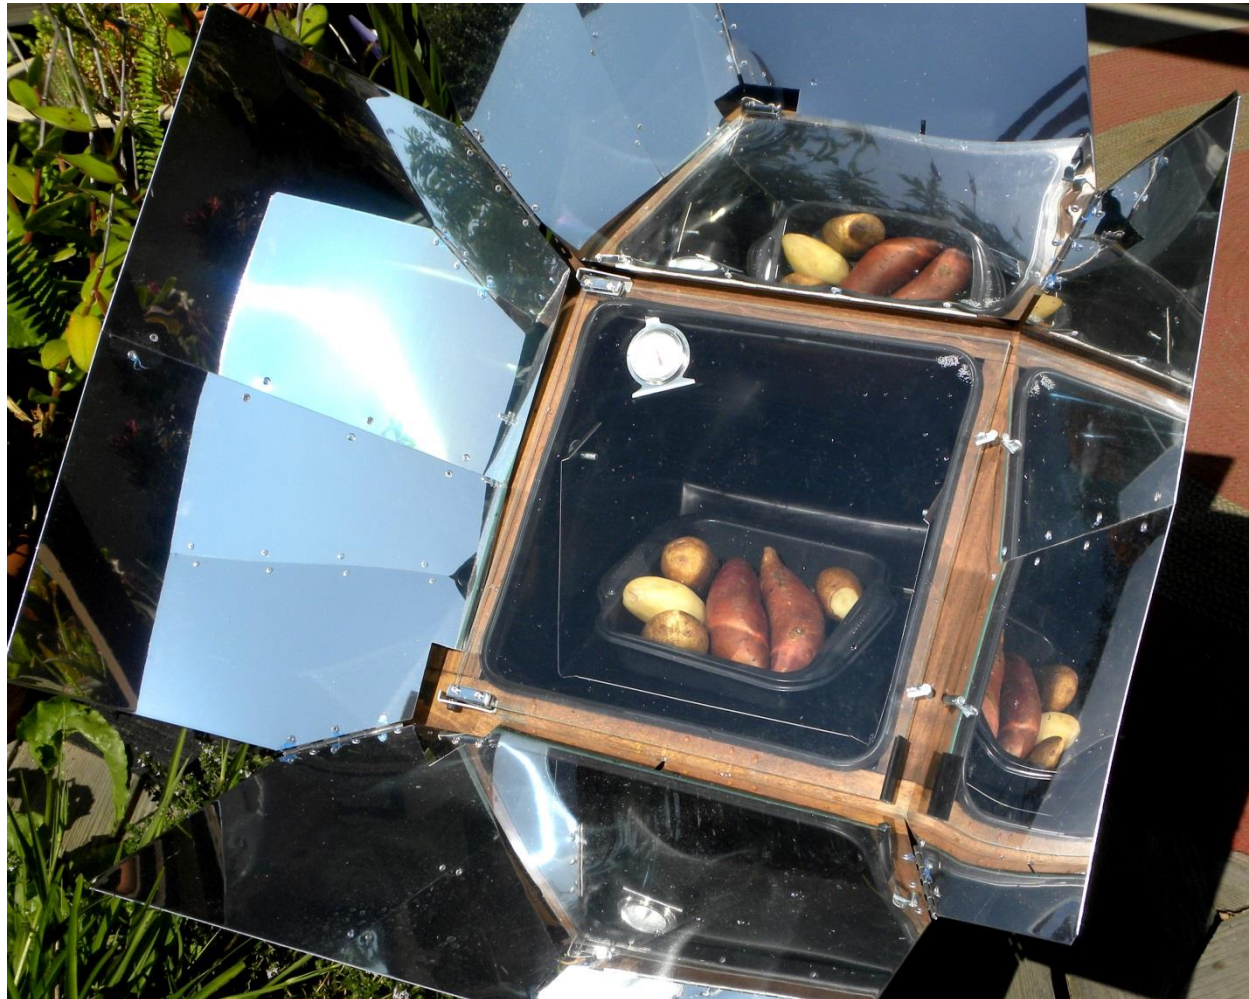

Light collectors  
(mirrors)

Light-heat converter:  
Inside is black-absorbs  
light and **converts** it to  
heat.

Heat trapper: Light  
can get in through  
window, but oven is  
sealed so hot air  
cannot get out.

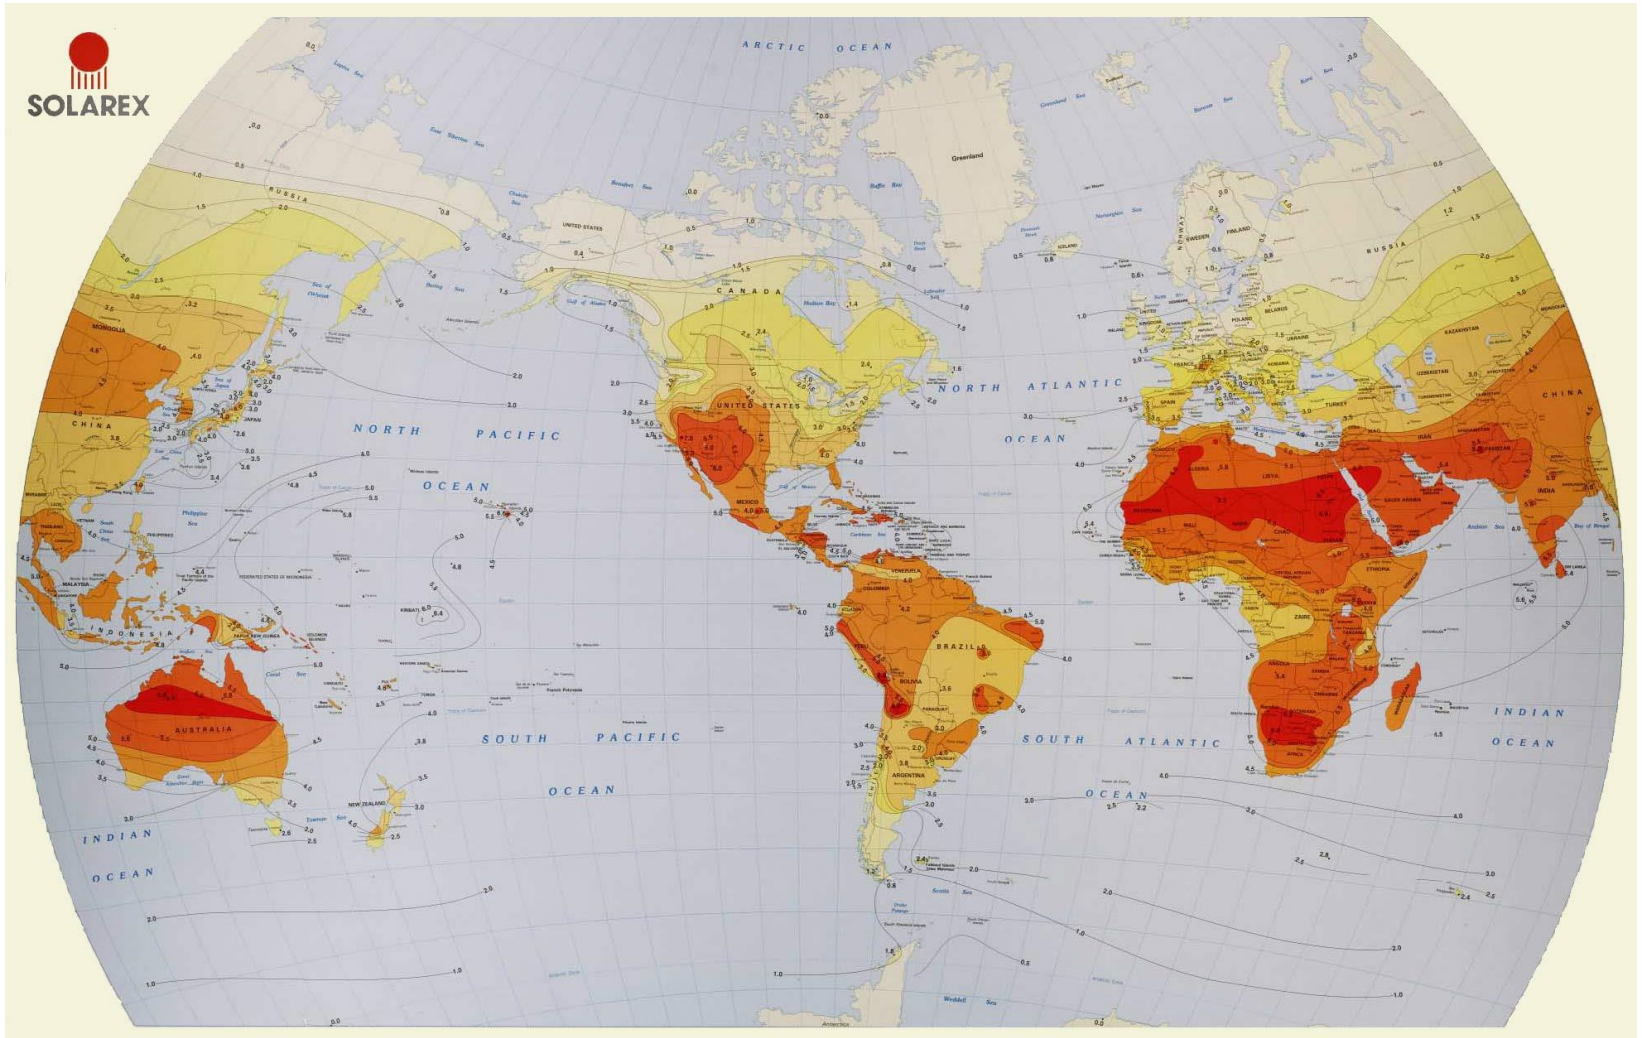

What do you think this is?

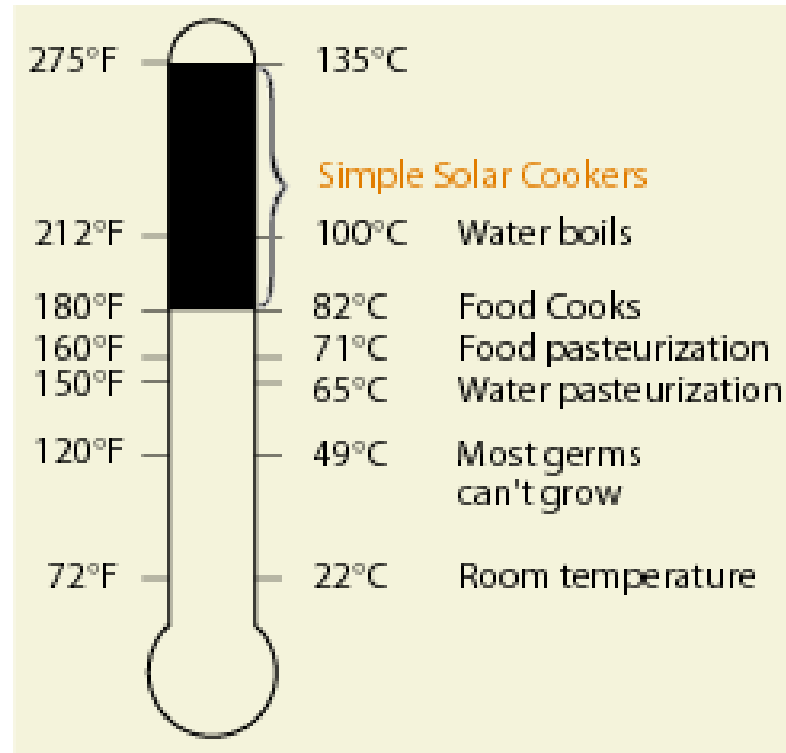

# Where might a solar oven be useful?

# Why use a solar oven?

# Different solar cookers

Wilson Solar Grill  
Current MIT project
