

Fill in the blank below each picture with one or more of the types of energy listed.

Types of energy: **Mechanical** || **Electrical** || **Gravity** || **Sound** || **Light** || **Heat**

Questions to think about:

- 1) How do various types of energy help us?
- 2) Does energy change type? Can it go from one type to any other? (eg. gravity to electrical?)
- 3) Can we obtain energy from any other sources besides the ones listed?
