How to Use

Choose a book to read with the class. There are several books about flowers! I included a list of possible choices on page 6. This flower-shaped foldable will allow your students to organize pictures and/or words to describe the life cycle of a plant. Several versions are included to meet the needs of your kids. The first one includes the pictures already in the correct order and already on the flower. The second one has cut and paste seeds/flowers that are already in the correct order. The last one includes pictures for all of the seeds/flowers in a random order. If these are too many choices for your kids, you could have them use 4 pictures (instead of 8) and have them paste them on every other petal, using the blank petals to label the parts.

A blank page has been added to the end to allow students to write or reflect on their learning.

DIRECTIONS:

1. Cut out the flower shape on the bold lines.
2. Snip each dotted line so the "petals" can fold towards the center of the flower.
3. Glue the plants/seeds, one on each "petal."
